BASICS OF ENVIRONMENTAL CHEMISTRY

PENERBIT UNIVERSITAS TRISAKTI, JAKARTA

Basics of environmental chemistry relating to geodynamic and biological processes are indispensable for all those who wish to gain an understanding of the chemical processes occurring in the environment which are impacted by humankind's activities.

This book helps students gain confidence in applying concepts towards solving environmental problems such as how the uncontaminated environment works, which chemical species in what concentrations are present naturally, and with what effects to climate, pollution, and means of sustaining the anthrosphere.
